

Build and Deploy AI Agents & Applications with Confidence

Move from prototype to production with expert support and advisory

Accelerating Innovation with Professional Services

What sets deepset apart is their technical expertise & collaborative approach to building AI applications and agents. They demonstrated exceptional ability to understand our credit analysis needs and rapidly deliver customised AI solutions for complex customer documents.

– **Nathan Holmes,**
Product Director, OakNorth Bank

With deepset, we have established a partnership characterized by mutual respect and professional equality. Their expertise, prompt responsiveness and transparent communication regarding ideas, adjustments and issues have proven to be invaluable.

– **Alexander Feldinger,**
Product Manager, MANZ

Here's How it Works

Our outcome-driven model adapts to where you are in your AI journey. The engagement is customizable—from strategic guidance and enablement to a combination tailored to your needs.

Four Service Pillars

AI Consulting

Gain a trusted partner to help prioritize high-value AI use cases and map them to the right technology, pipeline design, and deployment choices.

Post-Production Optimization

Partner with our technical resources to analyze user behavior, apply feedback, and integrate new technologies to improve performance.

Implementation

Work with our hands-on AI engineers to refine and deploy the solutions to meet your unique requirements.

Onboarding & Education

Get training to help teams upskill to independently build AI use cases, evaluate pipelines, and manage governance through product sessions, documentation, and virtual or on-site workshops.

Service Delivery Options

Packages:

Small, medium, and large service packages align with your project.

Custom:

Daily a-la-carte options based on personalized scoping.

Forward Deployed Engineering (FDE):

Ongoing embedded services for select long-term, large-scale projects.

Focus Areas

Use Case Strategy

Help you select the most impactful applications based on feasibility, ROI, and your specific business context.

Pipeline Design

AI engineers provide hands-on guidance from initial architecture design through production deployment.

Infrastructure & Deployment

Enable secure, scalable, and flexible deployments across cloud, hybrid, or on-prem environments.

You get a single accountable partner to ensure your solution runs reliably
